

FJORDPARK BO Ø760 Bistro table

The FJORDPARK Café Set is an alternative to more classic table and bench sets, with a more open and airy look. The set also includes a smaller steel table that can either replace the wood-clad table or being used as a side table.

The chair is available with armrests and can also be supplied in a swivable model.

FJORDPARK is a long-lasting solution in terms of both materials and appearance, designed by studio VE2, elevating any outdoor space to new heights, through a functional and simple design.

Frames are made in hot-dip galvanised steel, also available as powder-coated in your choice of RAL colours.

The frame is always made of hot-dip galvanised steel, even if you choose the powder-coated version, as gives the product an extremely durable surface and meaning we can provide our customers with a product that requires virtually no maintenance. It also extends the lifetime of the steel considerably.

The wooden slats are made of oil-treated, FSC®-certified mahogany, which does not require extensive maintenance either, and it's an extremely durable material. Meaning your outdoor furniture will last for many years to come with minimal maintenance.

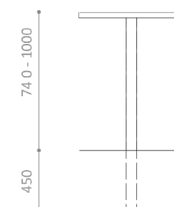

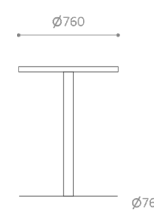

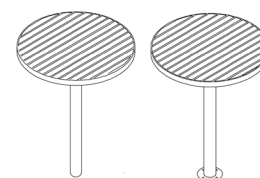

Materials

Frame: Hot-dip galvanised steel
