

FOLLY BENCH in HPC

Metalco reinterprets the Folly bench in its high-performance HPC concrete, giving a new look to Magis' famous product and sealing the partnership between two of the most important companies from Northern Italy in the urban furniture and furnishings sector.

Dynamic, fluid and sinuous, Folly is a moving sculpture with high aesthetic value, suitable for seating up to ten people and embellishing public and private spaces.

The Folly bench, made entirely of HPC (High Performance Concrete), is characterised by a ribbon shape with backrests at different heights.

The outer surface has raised waves that follow the profile of the bench and are in Veluto - smooth concrete finish.

The inner seating surface is available in a smooth concrete or polished finish.

The monolithic element is supported on the floor by means of four adjustable feet hidden from view to ensure perfect positioning even on flooring that is not perfectly horizontal, or it can be fixed to the floor by means of threaded rods.

Materials

HPC High Performance Concrete

Finishes

Natural smooth
Polished

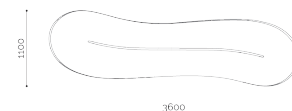

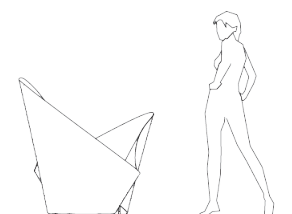

Colours

White
Grey
Green (special HPC colour for Folly only)
Murano

Dimensions

L: 3600mm
W: 1100mm
