

Agata Bench

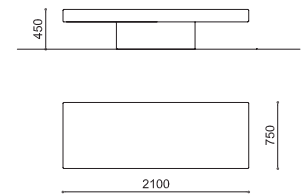

The Agata Bench is manufactured from a granite/marble stone horizontal surface, in various colours, dressed and sanded or bush hammered around the edges, with a galvanised and painted 4mm thick inner steel central support component. The surface is protected by special satin opaque varnishes. Ground fixing is possible with bolts (not supplied). The support surfaces are available in two versions: linear or curved sections. The linear version is also available in varnished timber and all surfaces can be supplied with flat seats or with a backrest, single or double, either in timber, stainless steel or powder-coated steel.

Materials

Frame - High Performance Concrete (HPC)
Seat - High Performance Concrete (HPC)

Dimensions

H: 450mm
W: 2100mm
D: 750mm
