

Biplano Cycle Stand

Modular bicycle rack, on two levels with supporting uprights in tubular steel with a perforated base plate for fixing to the ground with dowels. The lower guide rail, fixed, and the upper rail, tilting and controlled by a handle, are made of press-folded galvanized sheet. The wheel arches are made of tubular steel and also have the function of a safety device preventing the sliding of the bicycles and keeping them straight during handling.

It is available in single and double sided versions with alternating cycle storage heights to maximise economy of space and support the bicycles without creating interference between the handlebars.

The structure is in hot-dip galvanized steel according to UNI EN ISO 1461 standards and comes complete with a gas assisted lever system to assist users.

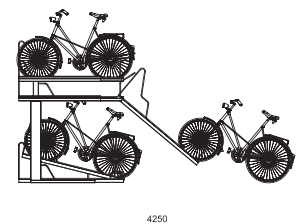

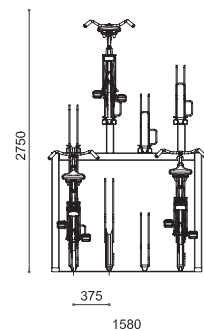

Specification

Materials

Frame - powder coated steel
