

## Delinea Barrier

The Delinea Barrier is made up of uprights manufactured in 8mm thick, double plate corten steel which is laser cut and welded with matching 8mm spacers. The barrier features a 80x2mm diameter brushed stainless steel tube handrail with end caps which is connected to the uprights with screws and countersunk bolts. All corten components are sandblasted and treated with a unique oxidisation. The Delinea can be formed together to create a continuous barrier to your desired length.

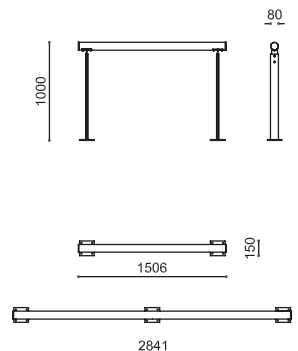

### Specification:

#### Materials:

Frame - corten steel; powder coated steel; stainless steel

### Dimensions

H: 1000mm  
W: 1506/2841mm  
D: 150mm
