

## Diamante Bench

The Diamante Seat is a modular seat system available in either Straight or 2 curved versions at 45 or 15-degree curve. This is then complimented with a multitude of toppers in either tropical hardwood or powder-coated steel. All toppers are created at half the bench length to allow complete flexibility in design. The straight bench has an option of stainless steel or painted tubular steel backrest, fastened with brass screws and stainless steel bolts.

The wood used is given two coats of UV-resistant water-based varnish to offer further protection.

The Diamante High-Performance concrete tops come in 3 colour options – White, Grey or Dark Grey and are also now available in the Comfort Range where the stone is heated by FIR Technology.

Legs come in empty or full versions and both are manufactured from 10mm steel, galvanised and powder coated or stainless steel.

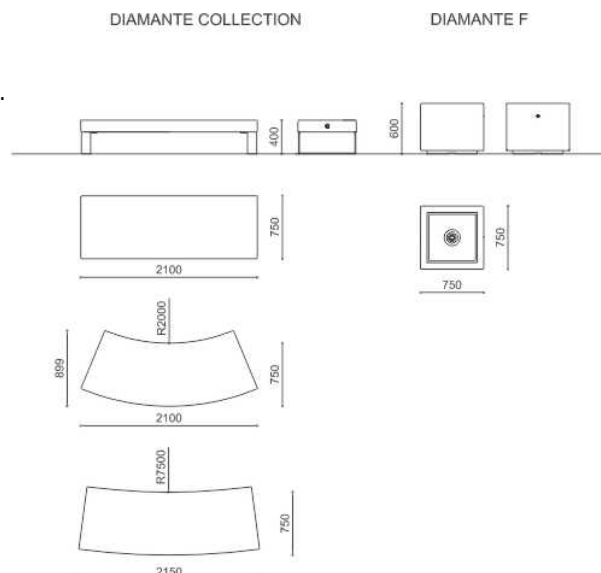

The Diamante F freestanding planter is designed to sit perfectly alongside these seats/ benches.
