

Flores Planter

The Flores Planter is made up of a supporting structure, an adjustable base in three points and 6mm thick galvanised steel upper ring. The outer covering is put together by mechanically fixing 9, 12 or 15 cast aluminium elements, which create an insulating chamber which improves the microclimate for the plants. All components are polyester powder coated. The stainless steel fixings are hidden.

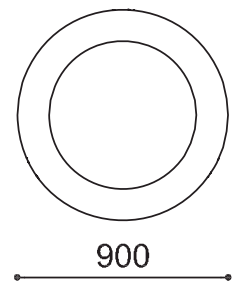

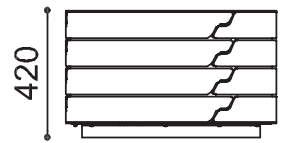

Specification:

Materials:

Body - aluminium

Dimensions

H: 420 - 540 - 660mm
Dia: 900mm

(Technical Drawings for variants available on request)
