

HopOp 500 Light

The luminous disc of the sun is a fascinating natural phenomenon to observe – and it keeps us all alive.

HopOp500 Light is the result of the desire to combine this evenly suffused glow with a simple piece of furniture for sitting and bouncing. HopOp500 Light can be positioned in different formations, even combining different colours to spark joy and connection – indoors and out.

HopOp500 Light was developed from the HopOp500. Adding light provides functionality in the dark – inviting users to rest or play during the day and transforming into luminous dots in space after sunset.

The integrated LED-light unit is mounted inside and glows through the translucent polyethylene surface with a uniform luminance.

Specification:

Materials:
Rotation moulded polyethylene
LED-light

Dimensions

Dia: 500mm
H: 400mm
