

Libre Evolution Seat

The Libre Torsion Seat is a double-sided seat which means it can be used by up to eight people, four sitting and four leaning. The seat is manufactured entirely from steel and is made up of four shaped sheet steel supports linked to a robust steel tube. The cast iron supports are coated with zinc primer and polyester powder which are then fixed to the bar with special coated cast aluminium clamps, they can be supplied with various positioning and ground fixing kits. Alternatively they can be hot dip galvanised then polyester powder coated.

All fixings are stainless steel. In order to create dynamic and articulated linear compositions, by adding extra benches, the base bench is available also as a flat bench, with the classic backrest or mixed flat / with back rest right-hand side, and mixed flat / with backrest left-hand side.

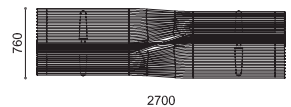

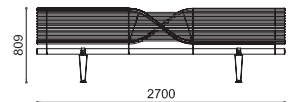

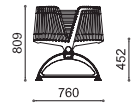

Specification:

Materials:

Frame / Seat - powder coated steel

Dimensions

H: 809mm
W: 2000mm
D: 730mm
