

Magic

The Magic Bollard is made from stainless or powder coated steel. The bollard is equipped with a gas piston movement system which allows the entire bollard to be hidden beneath ground level with a simple 15-20 KG of pressure. To ensure that only authorised access is allowed, each bollard is supplied with a locking system which blocks the piston. The box containing the mechanism and the hidden bollard is manufactured from steel sheet, whilst the visible cover is constructed from cast iron.
