

Nort Shelter

Modular shelter composed of load-bearing columns, a frame, both made of steel tube, and a back wall made of coupled glass sheets. The frame, equipped with a gutter to collect rainwater and convey it inside the columns, supports a roof in coupled and tempered glass sheets. The roof can accommodate a modular bench without backrest, with wooden seat, sustained by supports connected to the columns. It can be completed with glass side walls.

Materials

Powder coated steel

Dimensions:
