

The Stone Bench

The Stone Bench is a multi-purpose free-shape seat that is available in three complementary sizes and two materials, High-Performance Concrete (HPC) and the large unit only is also available in Ultra-High-Performance Concrete (UHPC). The advantage of using UHPC is that the unit is hollow so significantly reducing weight to just 430kg which is a saving of 755kg on the HPC version. This opens up the product to be used on podium decks/ roof terraces without any weight issues.

Available finishes are VELVET for HPC and ALFA or PSI for the UHPC. The Stone Bench can be free-standing with pedestals or fixed into the ground with threaded rods.

Supplied with central lifting point which includes stainless steel cover cap and appropriate lifting eye is supplied on all orders.

This product sits perfectly alongside the Moonstone bench which is also available with an optional cantilevered Glulam timber bench.

Materials

High Performance Concrete

Ultra High Performance Concrete - Available for Large unit only

Dimensions:

Stone S

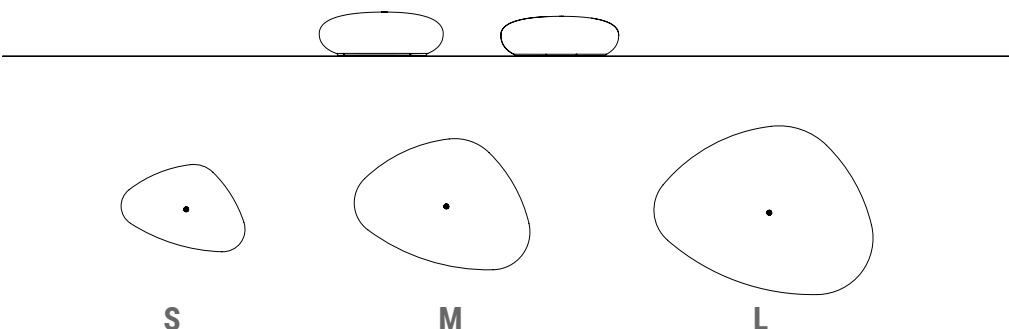

L: 1100mm
D: 780mm
