

## Strata Beam Bench

The Strata Beam Bench creates a distinctive gathering and resting place in natural and urban settings.

The Strata Beam Bench marries Meldstone™ technology with timber in a stylish variation on the concrete and timber classic. Cast concrete anchoring elements are bridged by timber seat slats to form an uninterrupted span. The end pieces are subtly faceted which provide a pleasing play between light and shadow, and are available in white, natural, and deep grey colours. The timber seat offers warmth and softness where the body interacts with the material.

The standard 2025mm length bench is available with or without backrest, and can be fitted with 2 or 4 armrests. The backless bench is also available in 780mm or 1747mm lengths. The modular corner bench is available in 45-degree, 60-degree and 90-degree angles. The modular connector units widen the scope of the Strata Beam family by enabling designers to create customised configurations ranging from L-shape and U-shape benches to fully enclosed polygons, to snaking asymmetric runs, and many more design configurations.

Combine with the Strata Beam Table for a comfortable outdoor setting with a distinctive designed picnic set. Pair with the smaller benches to provide wheelchair access.

### Dimensions:

Length:  
787/1753/2032mm  
Depth: 533mm  
Height: 787mm  
Seat Height: 432mm  
Weight: 108kg - 160kg
