

STRATA Bench

The STRATA Bench features strong horizontal planes and large flat surfaces with an angularity that makes it come alive. The seat is thick at the center and gets progressively thinner as it expands toward the edges. The bench is a single casting. The extension of the seating plane past the steel base at the ends makes the bench appear to float. Innovative right and left angled benches provide subtle corners so that people who are conversing can sit at angles and face each other. Straight and angled benches play off each other. The bench can be placed end-to-end, or the end of one bench can be positioned against the back of another.

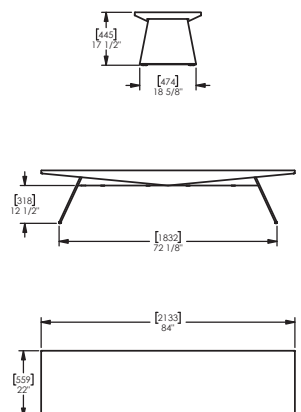

Specification:

Materials:

Bench- ultra high performance concrete (UHPC)
Base - powder coated steel

Dimensions

H: 445, 610mm
W: 2133, 2400mm
D: 559, 710mm

(Technical Drawings for variants available on request)
