

Sunstone

Sunstone is a completely Solar-powered LED lighting system housed in a square stone shape, to be installed into the ground or walls with no power cables or maintenance needed.

The light is refracted through the transparent and patterned polycarbonate top. It can cope with up to 10 tons of weight and turns on automatically after dark even in winter when sunlight is minimal. Four hours of charging in sunlight generates 8-10 hours of light. Ideal for brightening up footpaths, patios, parks and green spaces in addition to use on vertical surfaces, such as walls.

Specification:

Materials:

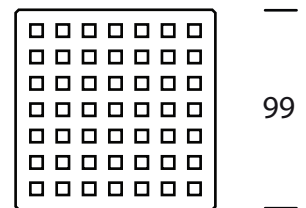

Body - Cast Aluminium
 Top - Moulded, transparent, UV- and scratch-resistant polycarbonate (PC) featuring a moulded skid-pattern

Fixing:

Sub Surface Mount. Place Sunstone in an open area - do not place under trees, pergolas etc. Avoid areas with powerful artificial night-time lighting.

Dimensions

99x99x62mm
