

Granite, Marble & Concrete

Granite & Marble

All the supporting parts are manufactured using a binding compound of marble or granite aggregate, carefully washed and sieved and offered in different colours. Seating and horizontal surfaces are smoothed, whereas all vertical surfaces are sanded or bush hammered.

Upon request and subject to surcharge, the whole structure can be supplied polished. Stone or granite surfaces are treated with special transparent satin opaque varnishes which increase the durability and capacity for fade and mould resistance while giving the structure a natural look.

All products are provided with bushings embedded into the mix for the installation and with eyebolts for handling and laying.

Colour Options

	Granite	Marble	
Polished			
Sand Blasted/ Hammered			

HPC

(PERFORMANCE CONCRETE)

Mixture made of performance reinforced concrete, with the addition of granite or marble aggregates, with good technical structural performance. The aggregates are carefully selected and available in different colours.

Key features of HPC products

Possible surface finishes of HPC products are:

- **POLISHED**
- **VELVET**
- **MIX OF POLISHED AND VELVET**

Not all products are available in all finishes: to view the finish of each item, see the product page.

The surfaces are treated with special anti-deterioration products which increase their life-span and their ability to resist the effects of run-off and the appearance of mildew and the like.

On request, and at an additional cost, an "ANTIGRAFFITI" treatment is available which permits removing the results of vandalism carried out with different types of sprays and permanent markers.

Products of higher weight are generally equipped with bushings embedded in the mixture suitable for screwing in handling and installation eyebolts.

Maintenance

Clean the material with water and mild detergent, to avoid build up of dirt and weathering. For small chips of the material it is possible to make the repairs with the appropriate kit to be ordered according to the type of stone finish.

UHPC

(ULTRA HIGH PERFORMANCE CONCRETE)

Mixture made of ultra-high performance fibre-reinforced concrete providing high technical and structural performance combined with extraordinary freedom of design.

Key features of UHPC products

The possible surface finishes of UHPC products are the following:

ALFA: Smooth surface finish

PSI: Textured surface finish

KAPPA: Wood grain type surface finish

CUSTOM TEXTURES: Custom finish achieved using a high and/or bas-relief technique.

Not all products are available in all finishes:

The products feature a special stain-resistant waterproofing treatment. With surcharge, another waxed treatment is available which further increases product waterproofing to view the options, see the product page

Products of higher weight are generally equipped with bushings embedded in the mixture for mounting handling and installation eyebolts.
