

Granite and Marble

All the supporting parts are manufactured using a binding compound of marble or granite aggregate, carefully washed and sieved and offered in different colours. Seating and horizontal surfaces are smoothed, whereas all vertical surfaces are sanded or bush hammered.

Upon request and subject to surcharge, the whole structure can be supplied polished. Stone or granite surfaces are treated with special transparent satin opaque varnishes which increase the durability and capacity for fade and mould resistance while giving the structure a natural look.

All products are provided with bushings embedded into the mix for the installation and with eyebolts for handling and laying.
