

Annapolis Bollard

Annapolis bollards are constructed from structural grade steel for exceptional strength, with a cast aluminium top and spun aluminium base ring. Available with or without low-voltage lighting. Both sizes are designed to be securely embedded in concrete. For additional site flexibility, the 152mm diameter is offered in a removable style. A keyed lock secures the bollard when in the socket. Upon removal, a cover plate fits flush with the surface; secured with a chain. Cover plate & chain, stores within the bollard base when the bollard is in the socket.

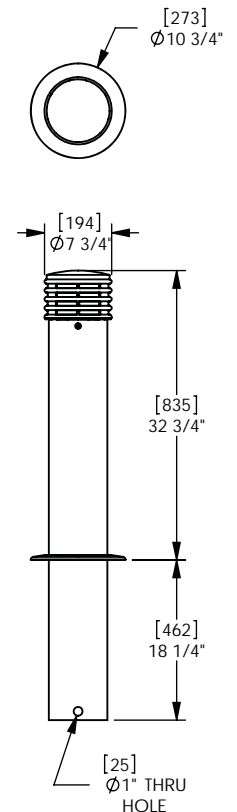

Specification:

Finishes:
Pangard™ II polyester powder coated.

Fixings:
Below ground installation. Surface mounted. Removable.

Dimensions

Height: 838/835mm
Diameter: 430/194mm
