

BikeBox Cycle Storage

The BikeBox is a modular alternative to cycle storage. The top cover can be opened with a gas strut aided gull-wing opening and is designed with loops for padlock locking. The Bikebox is offered in single or modular versions, to allow a combination of multiple modules, internally divided between them by panels of wire mesh. The steel cover can be customised with stickers or laser cutting. Ground fixing is through the cementation of suitable threaded rods to be fixed at the base of each support structure.

Specification

Materials

Frame - powder coated steel; corten steel

Dimensions

H: 1350mm
