

Reeder Monolith Cycle Stand

The Reeder Monolith illuminated cycle stand is sculptural in shape, elliptical in profile and has an optional LED light source mounted under the top. It serves multiple functions as a cycle stand and as a wayfinder in its own right. The integrated LED light source exemplifies our goal to bring subtle illumination to outdoor settings in non-conventional ways. The optional LED is hardwired. The cast aluminium body is powder coated with all standard colour palette options.

Specification
