

## Jessie

Jessie is a stand-up character. The versatile rail system has long lean legs topped by a 76mm or 305mm wide top. With 76mm top and mesh infill it creates a leaning rail at transit stops, a guardrail to delineate boundaries, or an attractive space separator between the path and outside the cafe. With 305mm top it becomes a bar or caf where it partners perfectly with Bernie bar-height chairs to create convivial social spaces. Extrusion end pieces with cast aluminium end caps are 130mm long. Rail is 1065mm high with 205mm of supports embedded. Rail can be embedded or surface mounted. Surface mount includes plate and cover castings.

### Specification:

#### Materials:

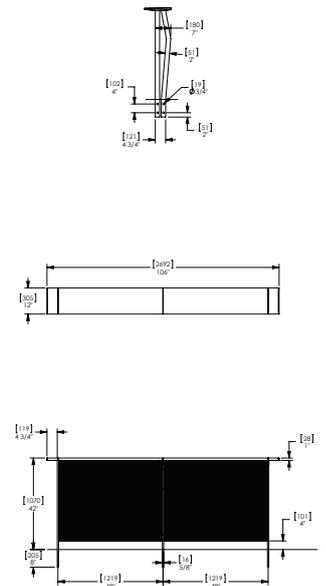

Steel Supports. Aluminium extrusions with cast aluminium splice locks & end caps.

#### Fixings:

Rail can be embedded or surface mounted. Surface mount includes plate and cover castings.

### Dimensions

H: 1070mm  
W: 2692mm  
D: 305mm
